Level vs width, plug-in, $n = 124$
half-width of the interval
confidence level $1 - \alpha$ (percent)
50%: ±0.029
90%: ±0.071
95%: ±0.084
99%: ±0.111
Sample size vs width, 95%
plug-in, $\hat{p} = 0.645$
conservative $\approx 1/\sqrt{n}$
±3 points needs
$n \approx 1{,}067$
$n = 124$: ±0.084
n (log scale)
