Upper tail under $p = \frac{1}{2}$
exact one-sided: 72
exact two-sided: 74
probability
count $n\bar{R}_n$
Tail probability vs threshold
exact: $\Pr(n\bar{R}_n \geq k)$
CLT: $\Pr(\text{Gauss} \geq k)$
Gaussian crosses 0.05 at 71.2
and 0.025 at 72.9: round up to 72, 73
exact: first step at or below each line
is 72 (tail 0.044) and 74 (tail 0.019)
0.05, one-sided
0.025, two-sided
$\Pr_{1/2}(\text{count} \geq k)$
threshold k
