One level-5% test for each p_0; the ones not rejected form the 95% interval
not rejected: [0.558, 0.724],
the solve interval
$p_0 = \frac{1}{2}$: segment misses the line, rejected
observed $\bar{R}_n = 0.645$
segment: proportions the test of
H_0: $p = p_0$ does not reject
sample proportion $\bar{R}_n$
candidate null value p_0
