drop from the top
slope at the null
$p_0 = \frac{1}{2}$
$\hat{p} = 0.645$
likelihood ratio: $2 \times 5.30 = 10.60$
Wald: $2 \times 5.71 = 11.41$
tangent at p_0: slope 72
score: $72^2/496 = 10.45$
$= 2 \times 5.23$
$\ell_n(p) - \ell_n(\hat{p})$
